PROJECTS

Crypto Tracker

Implemented React Web Application where user can track different crypto's available in the market. Some of the functionalities are price, market cap, price change, symbols of more than 100 cryptos.

- Application was developed using different react components and modules like use-Effect and use-State to make single page application without page reloading increases the speed by 5%.
- Axios - Get method is used to fetch API of cryptos of size more than 100.

Technologies used:

Weather App

A fast and responsive weather application functional with more than 10000+ locations data.

- Managed and planned the application layout with team of 2.
- Application uses APIs to fetch data which makes it 1.2x more faster than usual big applications.

Technologies used: JavaScript, HTML, CSS, Bootstrap.

SKILLS

Frontend: ReactJS, JavaScript, HTML, CSS, Bootstrap.

Backend: Python, NodeJS, Express.

Other Skills: Git, JSON, SQLite, RESTful APIs.

ACHIEVEMENTS

- 3 Star python achiever in hacker rank.
- Co-ordinated freshers and farewell party at the same time for two batches with capacity over 200+ people and got appreciated by the management.
